SUMMARY

Frontend Developer with 4 years of experience building scalable web applications for enterprise clients in banking, e-commerce, healthcare, and energy, using ReactJS, NextJS, and TypeScript. Specialized in frontend architecture, reusable component systems, and performance optimization — from data-heavy dashboards and large product catalogs to SSR and SEO-optimized storefronts.

TECHNICAL SKILLS

Core Technologies: HTML, CSS, JavaScript, TypeScript, ReactJS, NextJS

State & Data Fetching: TanStack Query (React Query), Redux, Redux Toolkit, Redux Saga, Axios

Architecture & Performance: Scalable frontend architecture, reusable component libraries & design systems, large-dataset rendering optimization, code splitting & lazy loading, SSR & SEO optimization, server-state caching

UI & Styling: TailwindCSS, SASS/SCSS, MUI, Kendo UI, Highcharts

Tooling & Practices: Vite, React Router, React Hook Form + Yup, SheetJS (XLSX), RSA encryption (JSEncrypt), matrix-js-sdk, REST API integration, Git, Agile / Scrum

PROFESSIONAL EXPERIENCE

South Telecom

Ho Chi Minh City

Frontend Developer

May 2022 – Mar 2026

- Delivered scalable frontend applications for enterprise clients across the Banking, E-commerce, Healthcare, and Energy sectors.
- Improved application performance by ~30% through React rendering optimization, code splitting, and lazy loading.
- Implemented secure JWT authentication with a refresh-token flow across multiple client projects.
- Independently bootstrapped frontend projects from setup to production, collaborating with backend, QA, and PM teams in Agile.

KEY PROJECTS

Bank Backoffice Management System (IVBank BO)

Duration: Jul 2025 – Mar 2026

Position: Sole Frontend Developer

Description: Comprehensive backoffice web application for a banking platform, enabling internal staff to manage customers, transactions, system configuration, and reporting.

Responsibilities:

- Owned end-to-end frontend architecture of a feature-rich SPA with role-based access control, from project setup (React 18 + Vite + TypeScript) to production.
- Designed a reusable UI component library (inputs, forms, data tables, modals, date pickers, charts) that standardized development across all modules.
- Delivered core banking modules: KYC, customer management, transaction management (PayBill, AutoBill, Topup), SMS management, voucher/template configuration, and reporting.
- Optimized data-heavy transaction tables and dashboards with TanStack Query server-state caching — request deduplication, background refetching, and cache invalidation to minimize redundant API calls.
- Built reporting dashboards with interactive Highcharts visualizations and Excel export of large datasets via SheetJS (XLSX).
- Implemented RSA encryption (JSEncrypt) for sensitive data handling and robust form validation flows with React Hook Form + Yup.

Tech Stack: HTML, CSS, JavaScript, React 18, TypeScript, Vite, TailwindCSS, SASS, TanStack Query, React Hook Form, Yup, Axios, Highcharts, React Router

LocStoc O2O E-commerce Storefront

Duration: May 2023 – Oct 2025

Position: Frontend Developer

Description: Consumer-facing O2O e-commerce marketplace within the LocStoc system, connecting online shopping with in-store retail.

Responsibilities:

- Built the storefront in NextJS with SSR, optimizing image-heavy product listing and detail pages with large product datasets for SEO and load performance.
- Implemented the checkout and payment flow with payment gateway integration and form validation.
- Developed the post-purchase experience: order progress tracking, order status updates, and the return/refund process flow.
- Built the customer support ticket interface for buyer–store issue resolution.
- Implemented SEO for marketing and informational pages (about, contact) with server-rendered content and metadata optimization.

Tech Stack: HTML, CSS, JavaScript, NextJS, TypeScript, React Query, React Hook Form + Yup, Axios, SASS/CSS

LocStoc — Retailer Management Platform

Duration: May 2023 – Oct 2025

Position: Frontend Developer

Description: B2B SaaS platform within the same LocStoc system, used by retailers, brands, and distributors to manage supply-chain operations.

Responsibilities:

- Developed and maintained key modules across the platform (React 17 + Vite), owning features end to end from UI implementation to API integration.
- Built analytics and reporting dashboards for sales, inventory, and business KPIs, using React Query server-state caching to keep data-heavy views fast and in sync.
- Implemented inventory and warehouse management — stock tracking, stock adjustment, and rack/shelf space allocation with visualization.
- Developed the full order lifecycle (creation, tracking, returns, status updates) and the checkout/payment flow with React Hook Form + Yup validation and payment integration.
- Built real-time shipment tracking UI, product management (listing, detail pages, CRUD), and Marketing Center campaign and promotion features.
- Developed a real-time messaging module with matrix-js-sdk, enabling instant customer and system support chat, unread message tracking, room-based message history, and file/image/video message delivery.

Tech Stack: HTML, CSS, JavaScript, React 17, TypeScript, Vite, React Query, React Hook Form + Yup, Axios, SASS/CSS, React Router v6

EDUCATION

Cao Thang Technical College
Information Technology

Ho Chi Minh City
2016 – 2019

CERTIFICATION

Frontend Developer — CyberSoft

2022

ADDITIONAL INFORMATION

Languages: English (Intermediate)

Strengths: Strong ownership mindset; able to work independently and deliver end-to-end features; continuous learning and adoption of modern frontend practices.
